Artificial Intelligence (AI) Primer

AI Definitions

- ▶ Artificial Intelligence: Machines that can learn from experience and operate without specific instructions; includes visual perception, logical reasoning and learning – “thinking machines”.
- ▶ Machine Learning: Computer algorithms that learn from data to predict patterns and outcomes.

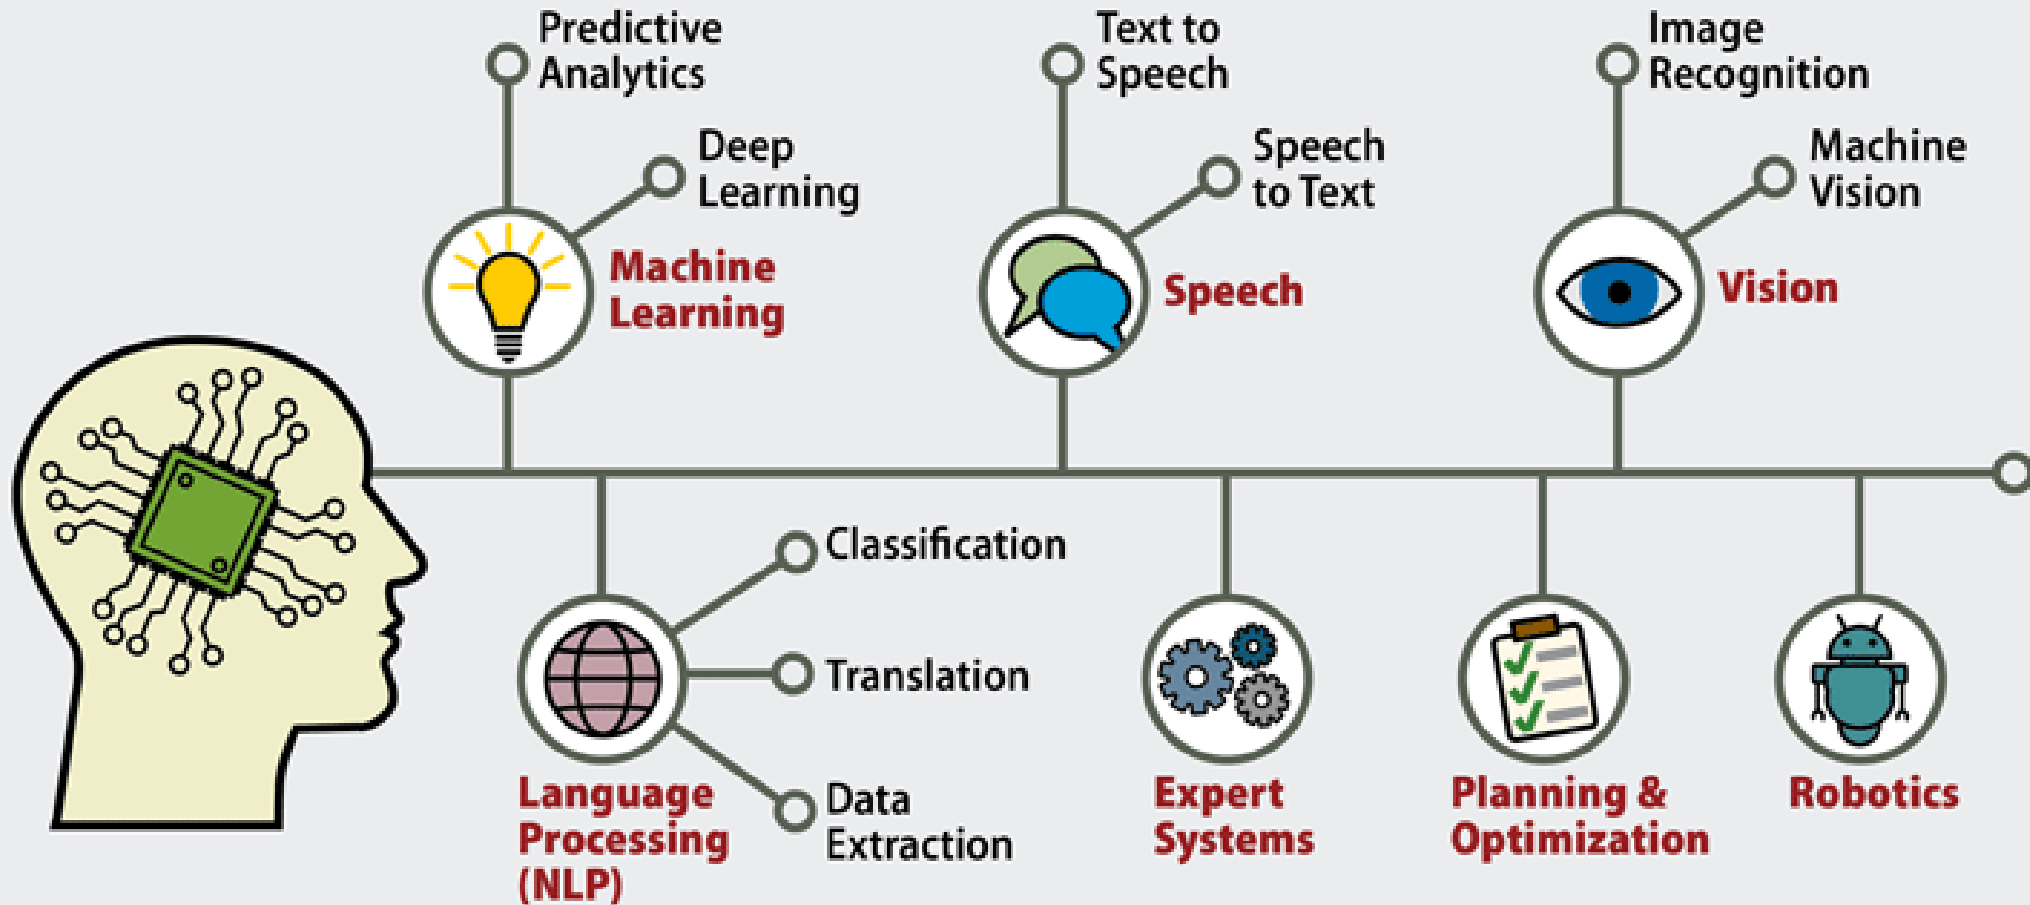

AI Definitions

- ▶ Neural Networks: Algorithms with a hidden layer of nodes.
- ▶ Deep Learning: A specific kind of neural network with many layers.
- ▶ Predictive Modeling and Analytics: The general practice of building models to predict specific outcomes.

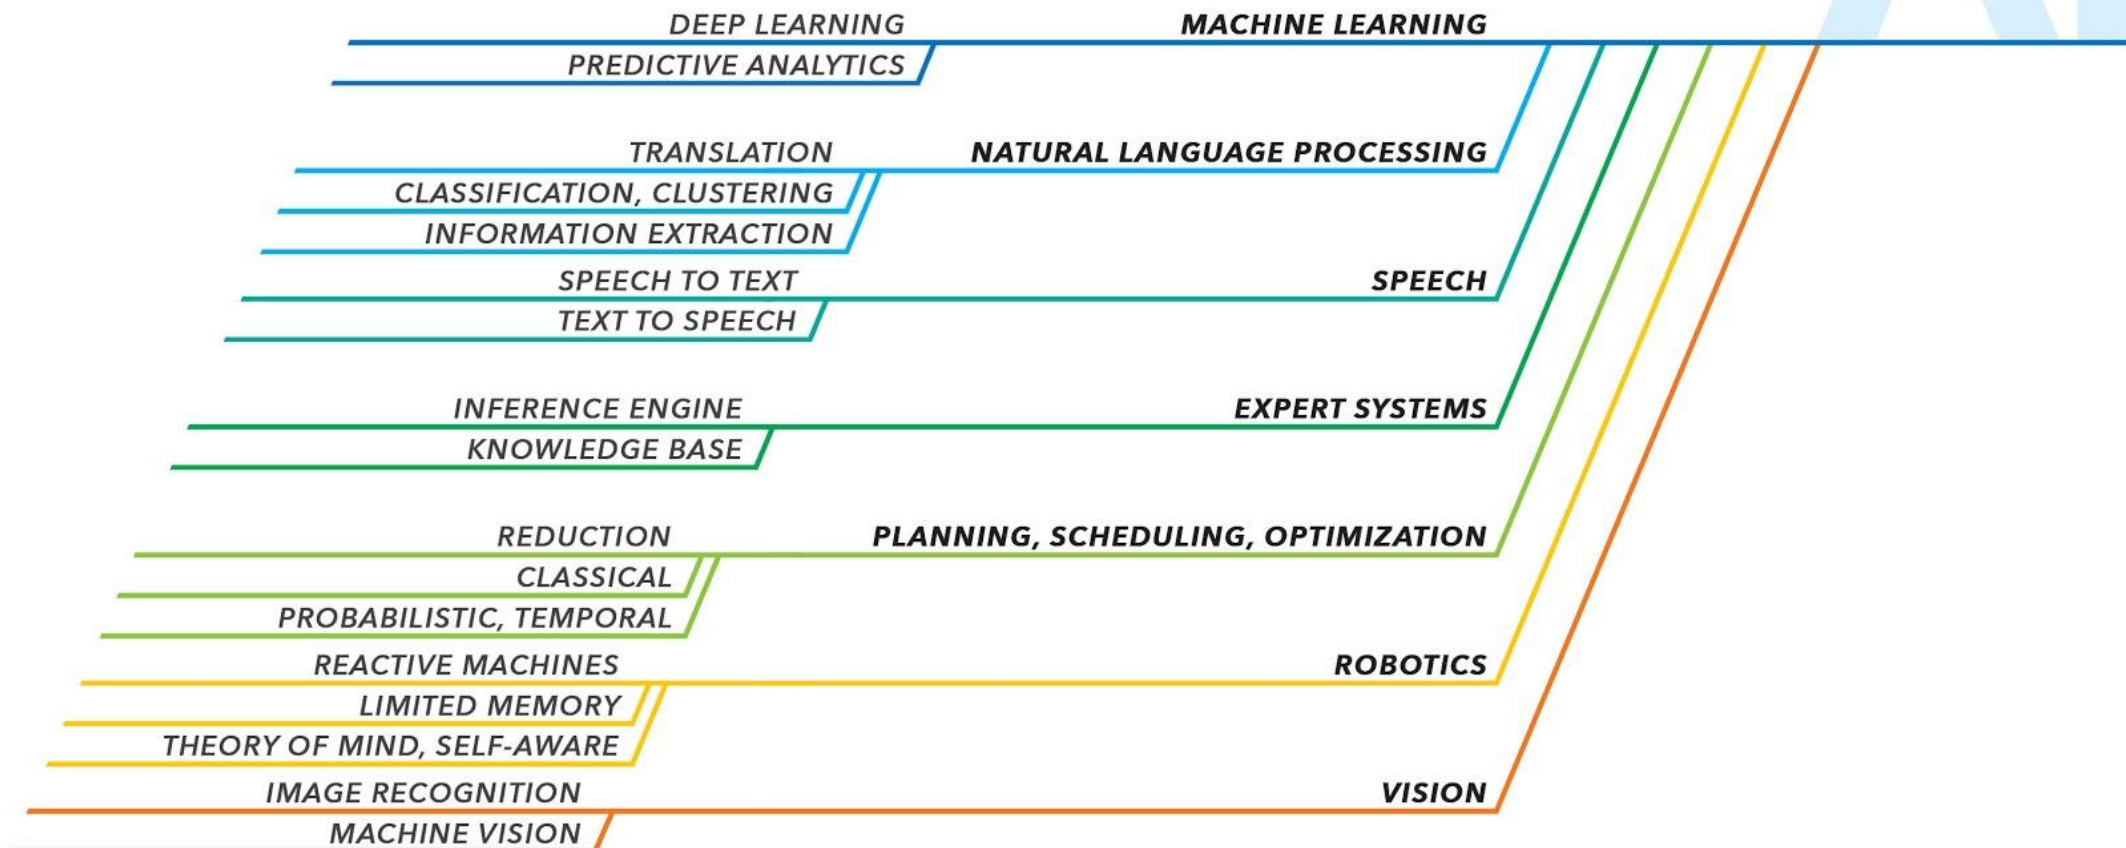

AI Definitions

- ▶ Expert System: An interactive and reliable computer-based decision-making system which uses both facts and heuristics to solve complex decision-making problems. It is considered at the highest level of human intelligence and expertise. The purpose of an expert system is to solve the most complex issues in a specific domain.
